

A high-quality science education provides the foundations for understanding the world through the specific disciplines of biology, chemistry and physics. Science has changed our lives and is vital to the world's future prosperity, and all pupils should be taught essential aspects of the knowledge, methods, processes and uses of science. Through building up a body of key foundational knowledge and concepts, pupils should be encouraged to recognise the power of rational explanation and develop a sense of excitement and curiosity about natural phenomena. They should be encouraged to understand how science can be used to explain what is occurring, predict how things will behave, and analyse causes.

Pupils should be taught to:

- To develop scientific knowledge and conceptual understanding through the specific disciplines of biology, chemistry and physics
- To develop understanding of the nature, processes and methods of science through different types of science enquiries that help them to answer scientific questions about the world around them
- The scientific knowledge required to understand the uses and implications of science, today and for the future.

Working Scientifically	 scientific enquiries to ans Setting up simple practicatests. Making systematic and cappropriate, taking accurstandard units, using a rathermometers and data I Gathering, recording, clawariety of ways to help in Recording findings using 	al enquiries, comparative and fair areful observations and, where rate measurements using unge of equipment, including oggers. ssifying and presenting data in a	 Planning different types of questions, including recomblered where necessary. Taking measurements, us equipment, with increasi repeat readings when ap Recording data and result scientific diagrams and la scatter graphs, bar and line 	ng accuracy and precision, taking propriate. ts of increasing complexity using bels, classification keys, tables, ne graphs. e predictions to set up further

	 Reporting on findings from enquiries, including oral and written explanations, displays or presentations of results and conclusions. Using results to draw simple conclusions, make predictions for new values, suggest improvements and raise further questions. Identifying differences, similarities or changes related to simple scientific ideas and processes. Using straightforward scientific evidence to answer questions or to support their findings. 		including conclusions, causal relationships and explanations of and degree of trust in results, in oral and written forms such as displays and other presentations. Identifying scientific evidence that has been used to support or refute ideas or arguments.	
Living things and their habitats	Identify and describe the functions of different parts of flowering plants: roots, stem/trunk, leaves and flowers. Explore the requirements of plants for life and growth (air, light, water, nutrients from soil, and room to grow) and how they vary from plant to plant. Investigate the way in which water is transported within plants. Explore the part that flowers play in the life cycle of flowering plants, including pollination, seed formation and seed dispersal.	Recognise that living things can be grouped in a variety of ways. Explore and use classification keys to help group, identify and name a variety of living things in their local and wider environment. Recognise that environments can change and that this can sometimes pose dangers to living things.	Describe the differences in the life cycles of a mammal, an amphibian, an insect and a bird. Describe the life process of reproduction in some plants and animals.	Describe how living things are classified into broad groups according to common observable characteristics and based on similarities and differences, including microorganisms, plants and animals. Give reasons for classifying plants and animals based on specific characteristics.
Animals including humans	Identify that animals, including humans, need the right types and amount of nutrition, and that they cannot make their own food; they get nutrition from what they eat.	Describe the simple functions of the basic parts of the digestive system in humans. Identify the different types of teeth in humans and their simple functions.	Describe the changes as humans develop to old age.	Identify and name the main parts of the human circulatory system, and describe the functions of the heart, blood vessels and blood.

	Identify that humans and some other animals have skeletons and muscles for support, protection and movement.	Construct and interpret a variety of food chains, identifying producers, predators and prey.	Recognise the impact of diet, exercise, drugs and lifestyle on the way their bodies function. Describe the ways in which nutrients and water are transported within animals, including humans.
Rocks	Compare and group together different kinds of rocks on the basis of their appearance and simple physical properties. Describe in simple terms how fossils are formed when things that have lived are trapped within rock. Recognise that soils are made from rocks and organic matter.		
Light	Recognise that they need light in order to see things and that dark is the absence of light. Notice that light is reflected from surfaces. Recognise that light from the sun can be dangerous and that there are ways to protect their eyes. Recognise that shadows are formed when the light from a light source is blocked by an opaque object. Find patterns in the way that the size of shadows change.		Recognise that light appears to travel in straight lines. Use the idea that light travels in straight lines to explain that objects are seen because they give out or reflect light into the eye. Explain that we see things because light travels from light sources to our eyes or from light sources to objects and then to our eyes. Use the idea that light travels in straight lines to explain why shadows have the same shape as the objects that cast them.

Forces and	Compare how things move on		Explain that unsupported

		gases to decide how mixtures	
		might be separated, including	
		through filtering, sieving and	
		evaporating.	
		Give reasons, based on	
		evidence from comparative and	
		fair tests, for the particular uses	
		of everyday materials, including	
		metals, wood and plastic.	
		Demonstrate that dissolving,	
		mixing and changes of state are	
		reversible changes.	
		Explain that some changes	
		result in the formation of new	
		materials, and that this kind of	
		materials, and that this killu of	

	change is not usually reversible,	
	including changes associated	
	with burning and the action of	
	acid on bicarbonate of soda.	
Earth and	Describe the movement of the	
Space	Earth, and other planets,	
	relative to the Sun in the solar	
	system.	
	Describe the movement of the	
	Moon relative to the Earth.	
	Describe the Sun, Earth and	
	Moon as approximately	
	spherical bodies.	
	Use the idea of the Earth's	
	rotation to explain day and	
	night and the apparent	
	movement of the sun across	
	the sky.	
Evolution and	,	Recognise that living things
Inheritance		have changed over time and
		that fossils provide information
		about living things that
		inhabited the Earth millions of
		years ago.
		Recognise that living things
		produce offspring of the same
		kind, but normally offspring
		vary and are not identical to
		their parents.
		Identify how animals and plants
		are adapted to suit their
		environment in different ways
		environment in different ways

		and that adaptation may lead to evolution.
